# Business Problem & Dataset

## Objective

Analyze Amazon sales data to answer:

- Which products generate the most revenue?
- What is the order cancellation rate?
- Which states contribute the highest sales?
- How can business performance be improved?

## Dataset Statistics

**128K+**

Records

**10K**

Orders Analyzed

**8**

Categories

Columns: Order ID, Category, Amount, Status, State, City, Quantity

# Data Cleaning & Analysis Pipeline

End-to-end data lifecycle from raw data cleaning in Python through SQL business analysis and Power BI visualization.

# Key Findings

## Revenue Insights

- **Total Revenue:** ₹58,47,853
- **Set** category: ₹31,18,626 — over 50% of total
- **Kurta:** ₹16,03,298 — second highest
- Set + Kurta dominate; Saree, Blouse, Bottom contribute minimal revenue

## Order Status (10,000 Orders)

- Shipped: 5,522 | Delivered: 2,832
- Cancelled: 1,426 (**14.26% rate**)
- Returned: 216 (~2.16%)
- 83.5% successfully fulfilled

# Power BI Dashboard & Recommendations

## Dashboard Features

Total Revenue & Orders KPIs · Cancellation Rate · Revenue by Category · Order Status Analysis · Top States Analysis

## Inventory Strategy

Increase stock for **Set** and **Kurta** — together they drive over 80% of revenue.

## Reduce Cancellations

Investigate cancellation reasons. A 5% reduction can significantly boost revenue.

## Marketing Focus

Bundle Kurta + Set products; optimize low-performers (Saree, Blouse, Bottom).

"This project demonstrates the complete Data Analytics lifecycle — data cleaning, exploratory analysis, SQL-based business querying, and dashboard development — converting raw sales data into actionable business insights."
